

backend.pdf

A relational database that lives inside this very document

no server no dependencies one file

1 Your todos

Add a todo:

Toggle or delete a todo by its id - type the number, then click.

To save your data, use the Download icon in the toolbar (Cmd+S only re-downloads the original).

2 SQL console

Edit the query and press Run SQL. Try: `select text from todos where done = 0`
